

Creating a Lead from a Contact

In Total Expert, a *contact* represents a general summary of an individual, including any available personal information; communication activity recorded in TE; existing applicable products; and relevant leads, tasks, and notes. Several actions are possible on a contact record, including creating a new lead from its stored information.

A *lead* is a focused look into a specific type of product that a contact is likely to be interested in, such as a mortgage or credit card account. There may be several leads associated with a single contact record, each of which can be assigned separately to ensure that the best person can work with the individual to satisfy their need.

Creating a Lead

You can use the information in an existing contact record to create a new lead quickly.

1. Navigate to **Leads & Contacts** → **Contacts**.
2. Click the name of the contact you want to use to create a lead.
3. In the Leads section at the top of the right column of data, click the **New Lead+** button.

Tip

You may need to expand the section by clicking the arrow to the left of the section header.

4. In the Create Lead box:
 - a. The **Lead First Name**, **Lead Last Name**, and **Email** fields are populated from the corresponding information in the contact record. Make any adjustments as necessary and fill in any empty fields.

The screenshot displays the 'Create Lead' modal for contact Bob Smith. The modal is a white box with a red border, containing the following fields and options:

- Lead First Name ***: Bob
- Lead Last Name ***: Smith
- Email ***: bobsmith@example.com
- Cell Phone ***: (empty)
- Product Type ***: Mortgage
- Add to Group**: Select
- Route to:** Team (radio button), Individual (radio button, selected)
- Route to:** Mary Davis
- Buttons:** Cancel, Create Lead

In the background interface, the 'Leads (0)' section is visible, and the 'New Lead +' button is highlighted with a red box. A red arrow points from this button to the 'Create Lead' modal.

- b. Enter a current cell phone number for the lead in the **Cell Phone** field. This number may differ from the number(s) associated with the contact record.
- c. In the **Product Type** drop-down list, select an available type of product that the lead may be interested in.
- d. (optional) In the **Add to Group** field, select 1 or more contact groups that the lead should be added to. These can be used to filter the lead list.
- e. For the **Route to** option select either:
 - i. **Team** – Select the lead source that should determine how the lead is assigned. The options shown in the drop-down list correspond to the Product Type you selected above.
 - ii. **Individual** – Select the specific user to whom the lead should be assigned. The options shown in the drop-down list are the users currently active in your organization. The lead is assigned directly to that user.
- f. Click the **Create Lead** button.

The new lead is added to the Leads section in the contact record. A brief summary is shown here, including the current status of the lead and a link to the full lead details page. Click **View** to go to that page.

The user who is assigned the lead also sees the lead in their lead list at **Leads & Contacts → Lead Management → Leads**.
